

EPIM Cabot Growth

Investment objective and policy

These discretionary managed model portfolios offer risk-profiled investment solutions, all of which have a dynamic top-down asset allocation strategy implemented using low cost index tracking funds.

The investment objective for the EPIM Cabot Growth Model Portfolio is to provide a long-term total return which is superior to inflation plus 3% returns. The performance of the model portfolio is not intended to track the rise (or fall) of any specific index.

Key facts

Inception Date	30/09/2012
Typical Growth / Defensive Split	65:35
Annual Management Charge	0.20%
Total Ongoing Charges (of underlying funds)	0.16%
Portfolio Total Ongoing Charge	0.36%

The rally in equity markets that started in November last year lost steam in April as market expectations of the number of interest rate cuts in the US and UK this year dropped. This is due to stubborn inflation and continuing resilience in jobs markets.

The first-quarter reporting season got underway, with investors focusing on financial guidance for the coming quarters. Any companies that issued weak outlook statements have seen sharp share price falls.

Major US indices registered falls over April, but the FTSE 100 gained over the month following some solid earnings reports, bid activity and a fall in the pound. Indeed, the UK blue-chip index managed to hit a series of record highs during the month, with the more UK focused FTSE 250 also gaining.

Higher inflation readings since the turn of the year have forced the Federal Reserve to take some of the previously expected interest-rate cuts off the table. US economic growth also remains strong, which is also inflationary. Federal Reserve Chair Jerome Powell has made it clear that interest rates will stay “higher for longer”.

Bank of England governor Andrew Bailey has said interest-rate cuts could come before inflation hits its 2% target. However, inflation has proved stubborn – and it slowed less than expected in March. Consumer prices rose at an annual rate of 3.2% in the month, down from 3.4% in February. Markets had expected a fall to 3.1%. Data suggests that the technical recession seen at the end of last year is over.

The European Central Bank (ECB) is expected to be the first major central bank to cut interest rates. Markets have interpreted discussions at the latest ECB meeting as more dovish than expected.

Market participants now think the US can engineer a soft economic landing as inflation is brought down to the Fed’s target level – although any delay in interest rate cuts to curb inflation has the potential to impede economic growth. However, if another recession emerges in the UK, it is expected to be shallow.

The value of investments, and the income derived from them, can fall as well as rise. Investors may get back less than invested. Returns may be affected by currency exchange rate fluctuations.

Performance is calculated on a Total Return basis using a notional portfolio in Financial Express Analytics. Performance is net of Eden Park Investment Management fees but not adviser fees nor platform costs. Any charges and fees applied by authorised intermediaries will be charged in addition to the charges shown. The Total Ongoing Charges Figure (TOC) is calculated by Financial Express Analytics using a weighted average of the underlying investments and represents underlying Ongoing Charges Figure plus Transaction costs plus Incidental costs for those holdings. Portfolios linked to this Model Portfolio may not exactly replicate the model due to the difference in timing of initial investment or rebalancing differences resulting from individual portfolio circumstances. The management and rebalancing of this Model Portfolio does not take Capital Gains Tax into consideration.
