

# EPIM Cabot Cautious

## Investment objective and policy

These discretionary managed model portfolios offer risk-profiled investment solutions, all of which have a dynamic top-down asset allocation strategy implemented using low cost index tracking funds.

The investment objective for the EPIM Cabot Cautious Model Portfolio is to provide a long-term total return which is superior to the UK CPI inflation rate. The performance of the model portfolio is not intended to track the rise (or fall) of any specific index.

## Key facts

<b>Inception Date</b>	30/09/2012
<b>Typical Growth / Defensive Split</b>	10:90
Annual Management Charge	0.20%
Total Ongoing Charges (of underlying funds)	0.18%
<b>Portfolio Total Ongoing Charge</b>	<b>0.38%</b>

Major stock market indices rose in April, despite concerns about the financial health of some US regional banks. The policy reaction from regulators, central banks and governments has been aggressive, well targeted and implemented rapidly, easing market concerns. First Republic Bank (FRB) became the latest smaller US bank that needed to be saved from collapse as investors withdrew deposits. The market reaction to the problems faced by FRB has been more muted than when worries about the banking sector first emerged in March and JP Morgan has now agreed to purchase the bank to solve the crisis at this institution. Although it is possible that there will be further issues at smaller banks in the US, the wider banking system remains well capitalised and the global economy continues in robust fashion, despite a slowdown in overall growth.

The jobs market continues to be robust in Western nations and the beneficial impact of the re-opening of the Chinese economy following tough anti-Covid measures is another economic positive. The first-quarter reporting season has now started, with corporate results generally positive. This has been particularly true for technology majors such as Microsoft, Google-owner Alphabet proving robust. The sector was hit particularly hard by market falls in 2022 so the solid nature of their results has helped significantly with market sentiment.

Inflation has started to fall rapidly in the US, helped by the fall in energy prices which spiked last year, but it remains a problem in the UK, with food inflation being particularly high. In the near-term, uncertainty around recession fears in many regions and the debt-ceiling debate in the US between Democrats and Republicans is likely to increase volatility and limit gains in the short term. Russia's invasion of Ukraine and the sanctions in response caused energy prices to spike last year, although prices have now fallen sharply.

## Important Information

Certain information ©2023 MSCI ESG Research LLC. Reproduced by permission

**The value of investments, and any income derived from them, can fall as well as rise and may be affected by exchange rate variations. Investors may get back less than invested.** Since the 31st of March 2021, performance was calculated on a Total Return basis using a notional portfolio in Financial Express Analytics. Before the 31st of March 2021, performance was calculated on a Total Return basis using a notional portfolio in Advent Portfolio Exchange (APX). Performance is net of Eden Park Investment Management fees but not adviser fees nor platform costs. Any charges and fees applied by platforms and/or authorised intermediaries will be charged in addition to the charges shown. The Total Ongoing Charges Figure (TOC) is calculated on a periodic basis using a weighted average of the most recent publicly available Total Ongoing Charges for the underlying investments as at the date of the factsheet. This includes the underlying funds' Ongoing Charges Figure plus Transaction costs plus Incidental costs. Please note that whilst we endeavour to show all charges associated with specific funds, sometimes this is not possible due to the information not being made available by the fund provider. In such cases transaction or incidental cost information may be missing. The Indicative Yield is provided for guidance purposes only and is calculated on a periodic basis using a weighted average of the most recent publicly available income yields for the underlying investments. Yields for the underlying funds, and thus for the strategy, are likely to differ in the future. The Indicative Yield does not represent guaranteed income. Portfolios linked to this Model Portfolio may not exactly replicate the model due to the difference in timing of initial investment or rebalancing differences resulting from minimum transaction size limits on platforms. The management and rebalancing of this Model Portfolio does not take Capital Gains Tax into consideration. This factsheet has been prepared for information purposes only and does not constitute advice or a personal recommendation, nor does it constitute an invitation to purchase units or shares. The information on which the document is based is deemed to be reliable.
