

EPIM Cabot Cautious

Investment objective and policy

These discretionary managed model portfolios offer risk-profiled investment solutions, all of which have a dynamic top-down asset allocation strategy implemented using low cost index tracking funds.

The investment objective for the EPIM Cabot Cautious Model Portfolio is to provide a long-term total return which is superior to the UK CPI inflation rate. The performance of the model portfolio is not intended to track the rise (or fall) of any specific index.

Key facts

Inception Date	30/09/2012
Typical Growth / Defensive Split	10:90
Annual Management Charge	0.20%
Total Ongoing Charges (of underlying funds)	0.11%
Portfolio Total Ongoing Charge	0.31%

Markets reacted negatively to Donald Trump’s trade strategy, unveiled at the start of April. The aggressive nature of the policy stoked fears that the US could fall into a recession and the sell-off was broad-based across asset classes.

Equities plunged as forecasting was made extremely challenging by the uncertainty the tariffs created. Yields on 10-year US treasury bonds rose sharply, contrary to what normally happens when equity prices fall – and investors seek safety in treasuries. Concerns over the policy’s impact on the US economy led to investors no longer seeing US government bonds as such a safe bet, demanding bigger returns. Commodity prices fell due to a weakening demand outlook, but gold hit a new record above \$3,500 a troy ounce.

Equity markets have rebounded from their early-April lows after a series of concessions and policy reversals from President Trump. As the month progressed, rapid changes that softened or delayed concerns over some of the more damaging proposals were announced. The introduction of the so-called “reciprocal” tariffs was suspended for 90 days for bilateral talks to be held.

Tariffs on Chinese goods were initially raised to 145% after Beijing responded with retaliatory measures against US imports – but moves have since been made to help US businesses that are positive for Chinese exporters too. Smartphones and electronic components imports have been removed from tariffs to avoid significant price increases for US consumers and to maintain corporate supply chains.

By the end of the month, Mr Trump was even indicating that a Beijing-Washington trade deal could be possible soon. Indeed, the US economy contracted in the first quarter of 2025, mainly due to a surge in imports ahead of the expected introduction of tariffs. The negative growth means speculation of a “Trump recession” has mounted significantly.

The first-quarter reporting season has started amid this backdrop of significant uncertainty. In general, earnings in the quarter were better than expected but many companies have trimmed their full-year guidance due to the tariff uncertainty.

Important Information

Certain information ©2023 MSCI ESG Research LLC. Reproduced by permission

The value of investments, and the income derived from them, can fall as well as rise. Investors may get back less than invested. Returns may be affected by currency exchange rate fluctuations.

Performance is calculated on a Total Return basis using a notional portfolio in Financial Express Analytics. Performance is net of Eden Park Investment Management fees but not adviser fees nor platform costs. Any charges and fees applied by authorised intermediaries will be charged in addition to the charges shown. The Total Ongoing Charges Figure (TOC) is calculated by Financial Express Analytics using a weighted average of the underlying investments and represents underlying Ongoing Charges Figure plus Transaction costs plus Incidental costs for those holdings. Portfolios linked to this Model Portfolio may not exactly replicate the model due to the difference in timing of initial investment or rebalancing differences resulting from individual portfolio circumstances. The management and rebalancing of this Model Portfolio does not take Capital Gains Tax into consideration.
