Portfolio description

The primary objective of this portfolio is to achieve capital growth in excess of inflation. The portfolio is diversified across a range of asset classes, with a medium allocation to funds investing in equities (expected to be no greater than 75%) and other risk assets. Target Volatility: 5%-9%

Sustainable philosophy

The ultimate goal of the portfolio is to support more inclusive social and economic development and more sustainable environmental and business practices, whilst generating strong and consistent investment returns. The portfolio will aim to achieve this by investing in a diversified range of funds which include themes such as renewable energy, financial inclusion, education, social housing, climate change action, sustainable waste management and renewable material production.

Monthly investment update

December marked a weak end to what was otherwise a strong fourth quarter for global equities as the market rally that started in October ran out of steam, as worries over the pace of central bank policy tightening continued to impact global markets. However, inflationary pressures in the US and the EU have continued to show signs of easing, which in turn has optimism around the extent and duration of high interest rates. A key contributor was the drop in wholesale energy prices, as countries continue to build supplies of natural gas coupled with seasonally warm winter temperatures. In Asia, the Chinese stock market provided a bright spot, as the Chinese Communist Party altered their approach to covid restrictions. China's removal of strict covid policy, held in place for around 3 years, will help restore economic activity but as cases rise expect the ride to be bumpy here. In the US, labour market continues to remain tight but slowing economic data should start to feed through to wages, one of the 'stickier' elements of inflation.

As markets have continued to show greater stability around the expectations for central bank policy and early signs of inflation starting to roll over, this should help support risk assets which have been driven by missteps in market pricing over the past year.
