

EPIM Cabot Cautious

Investment objective and policy

These discretionary managed model portfolios offer risk-profiled investment solutions, all of which have a dynamic top-down asset allocation strategy implemented using low-cost index tracking funds.

The investment objective for the EPIM Cabot Cautious Model Portfolio is to provide a long-term total return which is superior to the UK CPI inflation rate. The performance of the model portfolio is not intended to track the rise (or fall) of any specific index.

Key facts

Inception Date	30/09/2012
Typical Growth / Defensive Split	10:90
Annual Management Charge	0.20%
Total Ongoing Charges (of underlying funds)	0.10%
Portfolio Total Ongoing Charge	0.30%

In December 2025, global equity markets closed out a year of strong gains with a mixed, but broadly positive, performance as investor caution balanced resilient earnings and evolving macroeconomic signals. Major equity indices finished the month modestly higher, buoyed by strong performances in both developed and emerging markets. The S&P 500 rose over the month, yet the tech heavy Nasdaq ended the month slightly lower. Investors continued to be cautious about valuations in the mega-cap names exposed to artificial intelligence (AI) and cloud computing due to their continuing massive investment in infrastructure. UK and Euro area equities also advanced, with a strong performance from the FTSE 100, which reached a fresh all-time high. Japan’s Nikkei 225 ended December slightly up, finishing the year above 50,000 for the first time. The Federal Reserve lowered its federal funds rate by 25 basis points (bp) to a range of 3.50–3.75% – its third cut in 2025 – backed by a 9–3 vote amid rising concerns over a weakening labour market and delayed data due to a government shutdown. The cut was made despite inflation remaining above target, resulting in the market taking the view it was a “hawkish cut”. Markets are pricing in a more aggressive Federal Reserve easing cycle in 2026 than official signals suggest. Meanwhile, the Bank of England’s Monetary Policy Committee produced a narrow 5-4 vote to reduce its Bank Rate by 25 basis points to 3.75%, citing receding inflation (down to 3.2% in November) and softening economic conditions, but warned that the future path of policy would hinge on evolving inflation data. The bond market saw a retreat in yields late in the month, as the Federal Reserve’s December meeting minutes revealed deep divisions among policymakers. Commodities ended the year with significant divergence. Metals posted robust gains in December, with copper futures hitting record highs and gold was still in favour as a safe-haven asset, but energy prices faced renewed pressure from concerns about a global supply of crude.

Important Information

Certain information ©2023 MSCI ESG Research LLC. Reproduced by permission

The value of investments, and the income derived from them, can fall as well as rise. Investors may get back less than invested. Returns may be affected by currency exchange rate fluctuations.

Performance is calculated on a Total Return basis using a notional portfolio in Financial Express Analytics. Performance is net of Eden Park Investment Management fees but not adviser fees nor platform costs. Any charges and fees applied by authorised intermediaries will be charged in addition to the charges shown. The Total Ongoing Charges Figure (TOC) is calculated by Financial Express Analytics using a weighted average of the underlying investments and represents underlying Ongoing Charges Figure plus Transaction costs plus Incidental costs for those holdings. Portfolios linked to this Model Portfolio may not exactly replicate the model due to the difference in timing of initial investment or rebalancing differences resulting from individual portfolio circumstances. The management and rebalancing of this Model Portfolio does not take Capital Gains Tax into consideration.
