

# EPIM Cabot Growth

## Investment objective and policy

These discretionary managed model portfolios offer risk-profiled investment solutions, all of which have a dynamic top-down asset allocation strategy implemented using low cost index tracking funds.

The investment objective for the EPIM Cabot Growth Model Portfolio is to provide a long-term total return which is superior to inflation plus 3% returns. The performance of the model portfolio is not intended to track the rise (or fall) of any specific index.

## Key facts

<b>Inception Date</b>	30/09/2012
<b>Typical Growth / Defensive Split</b>	65:35
Annual Management Charge	0.20%
Total Ongoing Charges (of underlying funds)	0.18%
<b>Portfolio Total Ongoing Charge</b>	<b>0.38%</b>

Equity markets started 2023 on a positive note, with most major indices rising in January. This was despite comments from central bankers confirming that the aggressive campaign to tame inflation was not yet over, although policymakers confirmed that recent monetary policy was having an impact on inflation.

China's rapid reopening after Beijing's U-turn on its strict Covid-19 policies generated more interest in its stock market, but concerns about the spread of the virus remain. Chinese officials insist that the "reopening wave" of infections has peaked, but the data cannot be verified.

The uncertain near-term economic outlook has amplified market volatility, as recession fears weigh on expectations for company earnings in 2023. Companies have started reporting quarterly earnings from the final three months of last year, with mixed performances so far. US companies have not been helped by the relative strength of the US dollar, as it hits foreign earnings when translated back into the US currency for reporting purposes. This trend reversed in the final quarter after central banks in Europe and Japan applied a more aggressive monetary policy, signalling that they intend to close the gap with higher US yields, a move that drove their currencies higher.

In 2023, central banks need to ensure that the brakes they are putting on economic growth are strong enough to impact prices, but not so intense that they cause the desired easing in economic activity to overshoot. Recent data suggests authorities are on track to achieve their aims, with any slowdown being gentle, but the slowdown is likely to limit market returns until economic data clearly improves.

## Important Information

Certain information ©2023 MSCI ESG Research LLC. Reproduced by permission

**The value of investments, and any income derived from them, can fall as well as rise and may be affected by exchange rate variations. Investors may get back less than invested.** Since the 31st of March 2021, performance was calculated on a Total Return basis using a notional portfolio in Financial Express Analytics. Before the 31st of March 2021, performance was calculated on a Total Return basis using a notional portfolio in Advent Portfolio Exchange (APX). Performance is net of Eden Park Investment Management fees but not adviser fees nor platform costs. Any charges and fees applied by platforms and/or authorised intermediaries will be charged in addition to the charges shown. The Total Ongoing Charges Figure (TOC) is calculated on a periodic basis using a weighted average of the most recent publicly available Total Ongoing Charges for the underlying investments as at the date of the factsheet. This includes the underlying funds' Ongoing Charges Figure plus Transaction costs plus Incidental costs. Please note that whilst we endeavour to show all charges associated with specific funds, sometimes this is not possible due to the information not being made available by the fund provider. In such cases transaction or incidental cost information may be missing. The Indicative Yield is provided for guidance purposes only and is calculated on a periodic basis using a weighted average of the most recent publicly available income yields for the underlying investments. Yields for the underlying funds, and thus for the strategy, are likely to differ in the future. The Indicative Yield does not represent guaranteed income. Portfolios linked to this Model Portfolio may not exactly replicate the model due to the difference in timing of initial investment or rebalancing differences resulting from minimum transaction size limits on platforms. The management and rebalancing of this Model Portfolio does not take Capital Gains Tax into consideration. This factsheet has been prepared for information purposes only and does not constitute advice or a personal recommendation, nor does it constitute an invitation to purchase units or shares.
