

EPIM Cabot Global Equity

Investment objective and policy

These discretionary managed model portfolios offer risk-profiled investment solutions, all of which have a dynamic top-down asset allocation strategy implemented using low-cost index tracking funds.

The investment objective for the EPIM Cabot Global Equity Model Portfolio is to provide a long-term total return which is superior to inflation plus 4% returns. The performance of the model portfolio is not intended to track the rise (or fall) of any specific index.

Key facts

Inception Date	30/09/2012
Typical Growth / Defensive Split	80:20
Annual Management Charge	0.20%
Total Ongoing Charges (of underlying funds)	0.13%
Portfolio Total Ongoing Charge	0.33%

Global markets entered 2026 with strong momentum but heightened uncertainty, as record breaking equity performance collided with shifting monetary policy and rising geopolitical risk. US equity benchmarks continued setting fresh highs throughout January, supported by renewed Big Tech strength and optimism ahead of fourth quarter earnings. Earlier in the month, the S&P 500 and Dow had already pushed into record territory, driven by investor appetite for AI exposed companies and resilient macroeconomic data.

Bond markets told a different story. A sharp early January sell off in US Treasuries triggered a “yield shock”, sending the 10 year yield towards 4.35%, its highest level in months, as investors reassessed fiscal sustainability, labour market firmness and the likelihood of further Federal Reserve easing. That reassessment was reinforced at the central bank’s January meeting, where policymakers paused their sequence of late 2025 rate cuts and held the federal funds rate at 3.5–3.75%. They indicated a shift to a more cautious, data dependent stance amid persistent inflation and stabilising employment.

Emerging market equities also delivered a strong performance, buoyed by one of the fastest starts to a year in more than two decades as global investors rotated back into the asset class. A weaker US dollar and stabilising earnings expectations helped drive renewed risk appetite. Supportive macro factors — including stronger local currencies, easing inflation and policy divergence favouring earlier rate cuts relative to developed markets — created a favourable backdrop. January’s emerging market performance reinforced expectations that emerging markets could remain key beneficiaries of the global rotation away from US equities in 2026.

Fourth quarter earnings supported sentiment. By late January, around one third of S&P 500 companies had reported, with roughly 75% beating expectations — slightly below long term averages but delivering stronger than normal upside. Early results from major technology firms strengthened the market’s AI driven narrative. Geopolitical developments added volatility. The US capture of Venezuela’s president and a diplomatic clash with Denmark over Greenland signalled a more assertive US posture, while escalating tariff threats against Canada, South Korea and Mexico underscored Washington’s increasingly confrontational trade stance heading into 2026.

The value of investments, and the income derived from them, can fall as well as rise. Investors may get back less than invested. Returns may be affected by currency exchange rate fluctuations.

Performance is calculated on a Total Return basis using a notional portfolio in Financial Express Analytics. Performance is net of Eden Park Investment Management fees but not adviser fees nor platform costs. Any charges and fees applied by authorised intermediaries will be charged in addition to the charges shown. The Total Ongoing Charges Figure (TOC) is calculated by Financial Express Analytics using a weighted average of the underlying investments and represents underlying Ongoing Charges Figure plus Transaction costs plus Incidental costs for those holdings. Portfolios linked to this Model Portfolio may not exactly replicate the model due to the difference in timing of initial investment or rebalancing differences resulting from individual portfolio circumstances. The management and rebalancing of this Model Portfolio does not take Capital Gains Tax into consideration.
