

EPIM Cabot Global Equity

Investment objective and policy

These discretionary managed model portfolios offer risk-profiled investment solutions, all of which have a dynamic top-down asset allocation strategy implemented using low cost index tracking funds.

The investment objective for the EPIM Cabot Global Equity Model Portfolio is to provide a long-term total return which is superior to inflation plus 4% returns. The performance of the model portfolio is not intended to track the rise (or fall) of any specific index.

Key facts

Inception Date	30/09/2012
Typical Growth / Defensive Split	80:20
Annual Management Charge	0.20%
Total Ongoing Charges (of underlying funds)	0.16%
Portfolio Total Ongoing Charge	0.36%

Equity markets were mixed last month and bonds generally weaker. Positive for markets has been the resolution of the US debt-ceiling discussions, which prevented a potential – although unlikely – default on American debt payments. Republicans used their narrow majority in the House of Representatives to force President Biden into significant spending concessions, but the ceiling has been scrapped for two years until after the next US presidential election.

The UK blue-chip index hit a two-month low at the end of May, dragged down by weak oil and mining companies as concerns about China's recovery increased following a series of weak economic data releases. Although the economy is growing after Beijing relaxed its strict anti-Covid restrictions in December last year, activity in manufacturing and services have been below forecasts and exports have been weak.

US Inflation has started to fall significantly, and expectations are rising that the Federal Reserve will pause its series of rate increases in June, but policymakers may also want to see the jobs market weakening and wage growth tempering. In the UK, although energy prices have fallen, helping to temper inflation, food inflation remains a significant concern with household disposable income continuing to be squeezed. The rate of annual increases in UK food prices edged lower in May but rises in the cost of basic goods remained near record highs. This has led to expectations that the Bank of England may be forced to raise interest rates even higher than hoped to get inflation under control. This expectation resulted in gilt prices tumbling over the course of May, increasing UK bond yields sharply.

The move in yields and an assessment of the relative regional inflationary, policy and economic backdrops in the US and UK led us to rebalance our fixed income exposures. In particular, we added more duration and reduced our concentration in US sovereigns by diversifying into UK gilts.

Important Information

Certain information ©2023 MSCI ESG Research LLC. Reproduced by permission

The value of investments, and any income derived from them, can fall as well as rise and may be affected by exchange rate variations. Investors may get back less than invested. Since the 31st of March 2021, performance was calculated on a Total Return basis using a notional portfolio in Financial Express Analytics. Before the 31st of March 2021, performance was calculated on a Total Return basis using a notional portfolio in Advent Portfolio Exchange (APX). Performance is net of Eden Park Investment Management fees but not adviser fees nor platform costs. Any charges and fees applied by platforms and/or authorised intermediaries will be charged in addition to the charges shown. The Total Ongoing Charges Figure (TOC) is calculated on a periodic basis using a weighted average of the most recent publicly available Total Ongoing Charges for the underlying investments as at the date of the factsheet. This includes the underlying funds' Ongoing Charges Figure plus Transaction costs plus Incidental costs. Please note that whilst we endeavour to show all charges associated with specific funds, sometimes this is not possible due to the information not being made available by the fund provider. In such cases transaction or incidental cost information may be missing. The Indicative Yield is provided for guidance purposes only and is calculated on a periodic basis using a weighted average of the most recent publicly available income yields for the underlying investments. Yields for the underlying funds, and thus for the strategy, are likely to differ in the future. The Indicative Yield does not represent guaranteed income. Portfolios linked to this Model Portfolio may not exactly replicate the model due to the difference in timing of initial investment or rebalancing differences resulting from minimum transaction size limits on platforms. The management and rebalancing of this Model Portfolio does not take Capital Gains Tax into consideration. This factsheet has been prepared for information purposes only and does not constitute advice or a personal recommendation, nor does it constitute an invitation to purchase units or shares. The information on which the document is based is deemed to be reliable. Eden Park Investment Management has not independently verified such information and its accuracy or completeness is not guaranteed. Although Charles Stanley's information providers, including without limitation, MSCI ESG Research LLC and its affiliates (the "ESG Parties"), obtain information (the "Information") from sources they consider reliable, none of the ESG Parties warrants or guarantees the originality, accuracy and/or completeness, of any data herein and expressly disclaim all express or implied warranties, including those of merchantability and fitness for a particular purpose.
