

# EPIM Cabot Global Equity

## Investment objective and policy

These discretionary managed model portfolios offer risk-profiled investment solutions, all of which have a dynamic top-down asset allocation strategy implemented using low cost index tracking funds.

The investment objective for the EPIM Cabot Global Equity Model Portfolio is to provide a long-term total return which is superior to inflation plus 4% returns. The performance of the model portfolio is not intended to track the rise (or fall) of any specific index.

## Key facts

<b>Inception Date</b>	30/09/2012
<b>Typical Growth / Defensive Split</b>	80:20
Annual Management Charge	0.20%
Total Ongoing Charges (of underlying funds)	0.16%
<b>Portfolio Total Ongoing Charge</b>	<b>0.36%</b>

Equity markets continued to rally in May after losing some steam in April. Market expectations of the number of interest rates cuts in the US and UK this year has dropped. This is due to stubborn inflation and continuing resilience in jobs markets.

The first-quarter reporting season has almost concluded, with investors focusing on financial guidance for the coming quarters. Any company that issued weak outlook statements have seen sharp share price falls. The rise of artificial intelligence and an increase in demand for cloud computing has supported shares in US technology majors.

The performance of UK indices has been more subdued compared with those in the US. The lack of technology companies listed in London has resulted in a pedestrian rally when compared with US indices, with valuations are generally lower than on Wall Street.

Bank of England governor Andrew Bailey has said interest-rate cuts could come before inflation hits its 2% target. However, inflation has proved stubborn. The European Central Bank (ECB) is expected to be the first major central bank to cut interest rates – possibly as soon as June. Markets interpreted discussions at the latest ECB meeting as more dovish than expected. US rates may start coming down from September.

The conflicts in the Middle East continue to be unresolved. A short ceasefire in the Israel-Hamas conflict ended after less than a week and the situation remains tense. Attacks by Houthi forces on shipping have resulted in many tankers and container ships avoiding the Red Sea area and this has driven oil prices higher. The Russia-Ukraine war continues, with little sign of a resolution any time soon.

Market participants now think the US can engineer a soft economic landing as inflation is brought down to the Fed’s target level – although interest rates are likely to be kept “higher for longer” to curb inflation in both the US and UK – which has the potential to impede economic growth.

**The value of investments, and any income derived from them, can fall as well as rise and may be affected by exchange rate variations. Investors may get back less than invested.** Since the 31st of March 2021, performance was calculated on a Total Return basis using a notional portfolio in Financial Express Analytics. Before the 31st of March 2021, performance was calculated on a Total Return basis using a notional portfolio in Advent Portfolio Exchange (APX). Performance is net of Eden Park Investment Management fees but not adviser fees nor platform costs. Any charges and fees applied by platforms and/or authorised intermediaries will be charged in addition to the charges shown. The Total Ongoing Charges Figure (TOC) is calculated on a periodic basis using a weighted average of the most recent publicly available Total Ongoing Charges for the underlying investments as at the date of the factsheet. This includes the underlying funds' Ongoing Charges Figure plus Transaction costs plus Incidental costs. Please note that whilst we endeavour to show all charges associated with specific funds, sometimes this is not possible due to the information not being made available by the fund provider. In such cases transaction or incidental cost information may be missing. The Indicative Yield is provided for guidance purposes only and is calculated on a periodic basis using a weighted average of the most recent publicly available income yields for the underlying investments. Yields for the underlying funds, and thus for the strategy, are likely to differ in the future. The Indicative Yield does not represent guaranteed income. Portfolios linked to this Model Portfolio may not exactly replicate the model due to the difference in timing of initial investment or rebalancing differences resulting from minimum transaction size limits on platforms. The management and rebalancing of this Model Portfolio does not take Capital Gains Tax into consideration. This factsheet has been prepared for information purposes only and does not constitute advice or a personal recommendation, nor does it constitute an invitation to purchase units or shares.
