

EPIM Cabot Moderately Cautious

Investment objective and policy

These discretionary managed model portfolios offer risk-profiled investment solutions, all of which have a dynamic top-down asset allocation strategy implemented using low cost index tracking funds.

The investment objective for the EPIM Cabot Moderately Cautious Model Portfolio is to provide a long-term total return which is superior to inflation plus 1% returns. The performance of the model portfolio is not intended to track the rise (or fall) of any specific index.

Key facts

Inception Date	30/09/2012
Typical Growth / Defensive Split	30:70
Annual Management Charge	0.20%
Total Ongoing Charges (of underlying funds)	0.13%
Portfolio Total Ongoing Charge	0.33%

Markets initially reacted negatively to President Trump’s trade strategy, announced in April, due to its unexpectedly high and wide-ranging tariffs. Concerns over a potential US recession emerged, leading to sharp sell-offs in equity markets. However, markets later rebounded as the administration made concessions, postponed certain measures, and suspended the introduction of ‘reciprocal’ tariffs for 90 days to allow bilateral talks. Bond market movements also pressured Trump to ease his stance. Interest rates on 10-year treasury bonds rose sharply, defying typical trends during equity downturns, which could have resulted in higher consumer borrowing costs alongside rising prices due to tariffs. Gold, in contrast, benefited from uncertainty as investors sought safe-haven assets.

China retaliated to the tariff increases with its own countermeasures, leading the US to adjust its policies. The removal of tariffs on smartphones and electronic components helped American businesses and Chinese exporters alike. While Washington and Beijing initially reduced tariffs in May, negotiations soon stalled. The Trump administration further restricted US companies from selling semiconductor design software to Chinese firms and announced plans to double steel import tariffs.

This ongoing unpredictability has created significant uncertainty for businesses and investors. Corporate leaders struggle with investment decisions, fearing the long-term impact on growth. A slowdown in corporate spending could have negative economic consequences, exacerbating recession fears. The US economy contracted in Q1 2025, mainly due to a rush in imports ahead of expected tariffs, fuelling speculation about a “Trump recession.” Despite stronger-than-expected Q1 earnings, many companies have revised their full-year forecasts downward due to ongoing trade policy uncertainty. Market volatility is expected to persist until policies are clarified, and final measures could be even stricter than currently anticipated.

Important Information

Certain information ©2023 MSCI ESG Research LLC. Reproduced by permission

The value of investments, and the income derived from them, can fall as well as rise. Investors may get back less than invested. Returns may be affected by currency exchange rate fluctuations.

Performance is calculated on a Total Return basis using a notional portfolio in Financial Express Analytics. Performance is net of Eden Park Investment Management fees but not adviser fees nor platform costs. Any charges and fees applied by authorised intermediaries will be charged in addition to the charges shown. The Total Ongoing Charges Figure (TOC) is calculated by Financial Express Analytics using a weighted average of the underlying investments and represents underlying Ongoing Charges Figure plus Transaction costs plus Incidental costs for those holdings. Portfolios linked to this Model Portfolio may not exactly replicate the model due to the difference in timing of initial investment or rebalancing differences resulting from individual portfolio circumstances. The management and rebalancing of this Model Portfolio does not take Capital Gains Tax into consideration.
