

EPIM Cabot Moderately Cautious

Investment objective and policy

These discretionary managed model portfolios offer risk-profiled investment solutions, all of which have a dynamic top-down asset allocation strategy implemented using low cost index tracking funds.

The investment objective for the EPIM Cabot Moderately Cautious Model Portfolio is to provide a long-term total return which is superior to inflation plus 1% returns. The performance of the model portfolio is not intended to track the rise (or fall) of any specific index.

Key facts

| | |
|--|--------------|
| Inception Date | 30/09/2012 |
| Typical Growth / Defensive Split | 30:70 |
| Annual Management Charge | 0.20% |
| Total Ongoing Charges (of underlying funds) | 0.19% |
| Portfolio Total Ongoing Charge | 0.39% |

Equity markets mostly rallied in November, with gains driven by mounting hopes that the US Federal Reserve (Fed) will slow the pace of interest-rate rises before Christmas. This follows an aggressive campaign to tame inflation that has weighed heavily on equity markets. At the beginning of November, ongoing concerns about inflation and further central bank tightening were at the forefront of investors' minds. However, despite continued steep increases in policy rates from the Bank of England (BoE) and the Fed, bond markets registered a strong month across the board, with yields falling generating a positive total return.

Despite strong employment data in the US, and high inflation prints in Europe, bonds rallied through the month on the hope that aggressive interest-rate hikes were nearing an end and the pace of tightening of financial conditions would moderate. In the UK, the much-anticipated Autumn Statement signalled that the government would be working in lockstep with the BoE. This gave the market some comfort that future rate hikes may need to be less aggressive – despite continued high inflation.

Meanwhile, in the US and Europe, central banks' tone became more moderate, recognising the impact of rate hikes so far and becoming more vocal about their wish to avoid a steep downturn. It is likely that inflation has peaked in the US and elsewhere – and it should fall sharply during 2023. Nevertheless, the rate of price increases remains extremely elevated – and it will take some time before clear evidence emerges that inflation is heading towards target levels.

Central bankers need to ensure that the brakes they are putting on economic growth are strong enough to impact prices, but not so intense that they cause the slowdown to overshoot. Recent data suggests authorities are on track to achieve their aims, but the economic slowdown is likely to limit market returns until economic data clearly improves.

Important Information

The value of investments, and any income derived from them, can fall as well as rise and may be affected by exchange rate variations. Investors may get back less than invested. Since the 31st of March 2021, performance was calculated on a Total Return basis using a notional portfolio in Financial Express Analytics. Before the 31st of March 2021, performance was calculated on a Total Return basis using a notional portfolio in Advent Portfolio Exchange (APX). Performance is net of Eden Park Investment Management fees but not adviser fees nor platform costs. Any charges and fees applied by platforms and/or authorised intermediaries will be charged in addition to the charges shown. The Total Ongoing Charges Figure (TOC) is calculated on a periodic basis using a weighted average of the most recent publicly available Total Ongoing Charges for the underlying investments as at the date of the factsheet. This includes the underlying funds' Ongoing Charges Figure plus Transaction costs plus Incidental costs. Please note that whilst we endeavour to show all charges associated with specific funds, sometimes this is not possible due to the information not being made available by the fund provider. In such cases transaction or incidental cost information may be missing. The Indicative Yield is provided for guidance purposes only and is calculated on a periodic basis using a weighted average of the most recent publicly available income yields for the underlying investments. Yields for the underlying funds, and thus for the strategy, are likely to differ in the future. The Indicative Yield does not represent guaranteed income. Portfolios linked to this Model Portfolio may not exactly replicate the model due to the difference in timing of initial investment or rebalancing differences resulting from minimum transaction size limits on platforms. The management and rebalancing of this Model Portfolio does not take Capital Gains Tax into consideration. This factsheet has been prepared for information purposes only and does not constitute advice or a personal recommendation, nor does it constitute an invitation to purchase units or shares. The information on which the document is based is deemed to be reliable. Eden Park Investment Management has not independently verified such information and its accuracy or completeness is not guaranteed. Although Charles Stanley's information providers, including without limitation, MSCI ESG Research LLC and its affiliates (the "ESG Parties"), obtain information (the "Information") from sources they consider reliable, none of the ESG Parties warrants or guarantees the originality, accuracy and/or completeness, of any data herein and expressly disclaim all express or implied warranties, including those of merchantability and fitness for a particular purpose. The Information may only be used for your internal use, may not be reproduced or redisseminated in any form and may not be used as a basis for, or a component of, any financial instruments or products or indices. Further, none of the Information can in and of itself be used to determine which securities to buy or sell or when to buy or sell them.
