

EPIM Cabot Global Equity

Investment objective and policy

These discretionary managed model portfolios offer risk-profiled investment solutions, all of which have a dynamic top-down asset allocation strategy implemented using low cost index tracking funds.

The investment objective for the EPIM Cabot Global Equity Model Portfolio is to provide a long-term total return which is superior to inflation plus 4% returns. The performance of the model portfolio is not intended to track the rise (or fall) of any specific index.

Key facts

Inception Date	30/09/2012
Typical Growth / Defensive Split	80:20
Annual Management Charge	0.20%
Total Ongoing Charges (of underlying funds)	0.15%
Portfolio Total Ongoing Charge	0.35%

October was a volatile month for risk assets, with equity markets moving lower after a strong rally during the first nine months of the year. US Treasury yields rose ahead of the US presidential election in November, the outcome of which remained too close to call.

The US economy continued to be robust in the face of elevated interest rates and this resulted in a gradual repricing of the pace of interest rate cuts by the Federal Reserve. US GDP rose at a 2.8% annual rate in third quarter, although this was just shy of consensus of 3%. The CPI inflation measure edged lower in September data to 2.4%, but core inflation proved sticky, rising to 3.3%. Both data points came in ahead of market expectations.

The third-quarter earnings season was mixed, with companies broadly beating estimates while scaling back fourth-quarter guidance. This was the case with US mega-cap technology stocks, with companies operating cloud business continuing to benefit from AI interest, but forward guidance from companies such as Amazon and Microsoft falling short of Wall Street's lofty expectations.

In developed markets, Japanese equities were the top performer, despite concerns over the need for tighter policy. A stronger yen could have a negative impact its export-oriented economy and there is also a degree of political uncertainty in the country following its recent election. Japanese Prime Minister Shigeru Ishiba's ruling party and its junior partner lost their majority in the parliamentary election and this will make it difficult to push through reforms.

The rally in Chinese equities that started in September after authorities announced a raft of stimulus measures did not continue in October, as concerns about their ultimate impact on the economy mounted. Major Chinese equity indices moved off highs in early October – and traded rangebound for the rest of the month.

Oil prices were volatile, as the growth outlook prompted concerns over the demand outlook, weighed against continuing geopolitical tensions in the Middle East.

Important Information

Certain information ©2023 MSCI ESG Research LLC. Reproduced by permission

The value of investments, and the income derived from them, can fall as well as rise. Investors may get back less than invested. Returns may be affected by currency exchange rate fluctuations.

Performance is calculated on a Total Return basis using a notional portfolio in Financial Express Analytics. Performance is net of Eden Park Investment Management fees but not adviser fees nor platform costs. Any charges and fees applied by authorised intermediaries will be charged in addition to the charges shown. The Total Ongoing Charges Figure (TOC) is calculated by Financial Express Analytics using a weighted average of the underlying investments and represents underlying Ongoing Charges Figure plus Transaction costs plus Incidental costs for those holdings. Portfolios linked to this Model Portfolio may not exactly replicate the model due to the difference in timing of initial investment or rebalancing differences resulting from individual portfolio circumstances. The management and rebalancing of this Model Portfolio does not take Capital Gains Tax into consideration.
